

AGREEMENT FOR IRRIGATION METER

I, _____ am applying
(Applicant-Name Printed)

for an irrigation meter at _____
(Service Address)

The Florida Department of Transportation (FDOT) is requiring that cuts in state roads be milled down 1 inch and paved to a distance of 20 feet on either side of the cut and re-stripped. Customers connecting to ECUA water and/or sewer on a state road may incur additional connection fees and will be notified of the additional fees after a physical assessment has been conducted by ECUA.

I understand a backflow prevention assembly (BPA) will be required to be installed and may be required to be installed above grade. I also understand that I am responsible for the BPA to be tested every year for commercial accounts and every two years for residential accounts.

Please contact ECUA's Cross Connection Control Division at cross.connection@ecua.fl.gov for specific information.

It will be used to provide an accurate measure of water used for irrigation purposes only.

I understand that the water consumed through this meter cannot be discharged for treatment through the sewage system.

If usage is discharged through the sewage system, the appropriate service fees and backbill charges will be assessed.
